# Introduction

## Executive Summary

This West Coast Basin Watermaster Annual Report, developed by the Administrative Body and adopted by the Water Rights Panel, summarizes information on groundwater extractions, storage accounts, use of imported water and recycled water, replenishment operations and the budget and finances of the West Coast Basin (Basin) Watermaster during the 2020-2021 administrative year (AY). This report complies with the provisions set forth in the West Basin Amended Judgment.

During the 2020-2021 AY, the Basin experienced an 16% increase in groundwater production when compared to the previous AY. Furthermore, zero imported water was purchased by the Water Replenishment District of Southern California (WRD) for spreading in the Montebello Forebay. The report is organized by three sections, including Water Use, Water Supply, and Watermaster Costs and Budget. In addition, the report provides various tables and figures describing the narrated information.

## Background

The Basin underlies 160 square miles in the southwestern part of the coastal plain of Los Angeles County. Figure 1 shows the location and adjudicated boundaries of the Basin. The Basin is bounded on the west by the Santa Monica Bay, on the north by the Ballona Escarpment, on the east by the Newport-Inglewood Uplift, and on the south by the San Pedro Bay and the Palos Verdes Hills. Twenty incorporated cities and several unincorporated areas overlie the Basin.

An essential portion of the water needed by the residents and industries in the area overlying the Basin is pumped directly from groundwater stored in the Basins aquifers. In 1945, the intrusion of seawater caused by declining groundwater levels due to over pumping threatened the quality and quantity of the groundwater supply. In response to the seawater intrusion problem legal action was initiated halt the pumping overdraft and prevent further damage to the Basin. In 1955, the Superior Court of Los Angeles County (Court) appointed the Department of Water Resources (DWR) as the Watermaster to administer an Interim Agreement. Subsequently, in 1961, the Court retained the DWR as the Watermaster of the final West Coast Basin Adjudication (Judgment).

The Judgment has been amended multiple times since its inception. Noticeably, when the Judgment was amended on December 5, 2014 (Amended Judgment), for the first time, the Court allowed Parties to have direct input into how the Judgment is administered and enforced. Furthermore, the Amended Judgment confirmed the retirement of DWR as the Watermaster and established a new Watermaster structure.

The new Watermaster structure includes three separate constituent bodies serving different functions; 1) an Administrative Body, 2) a Water Rights Panel, and 3) a Storage Panel. The

Administrative Body performs the Watermaster accounting and reporting functions. The Water Replenishment District of Southern California (WRD) was appointed by the Court to fulfill this role. The Water Rights Panel enforces issues related to the pumping rights within the adjudications and is composed of five Basin adjudicated rights holders. The Storage Panel is comprised of the Water Rights Panel and the WRD Board of Directors, which together approve certain groundwater storage efforts.

The Watermaster assists the Court in the administration and enforcement of the provisions of the Judgment. Among other duties, the Watermaster monitors groundwater levels, extractions, storage, and reports significant water-related events.

# Water Use

## A. Adjudicated Extractions by Parties

The Judgment limits the amount of groundwater each Party with a water right may extract annually from the Basin. This limit is referred to as an “adjudicated right” or “AR”. The AR for each Party is listed in Table 1. Parties are required to report water extractions to the Administrative Body each month (or quarterly for small producers). Appendix A lists, by Party, the volume of groundwater extracted each month from each active well in the Basin. Figure 1 illustrates the variation of groundwater production by three distinct production classifications: less than 500 acre-feet per year (afy), 500 to 2,000 afy, and more than 2,000 afy, during the 2020-2021 AY. In addition, Figure 2 shows monthly water production (excluding non-consumptive use) for the 2020-2021 AY totaling 31,890 acre-feet (af), which is a 16% increase from the previous AY.

To provide flexibility in regard to groundwater extractions, the Judgment contains provisions, such as “carryover,” which allows each Party to carry over into the succeeding administrative year 100% of their unused AR plus or minus any leases with flex, if any. However, the amount of available carryover is reduced by the amount of Stored Water held by the Party. Yet, such reduction will not cause the amount of carryover to be less than 20% of a Party’s total adjudicated rights (including leases with flex). This type of provision is in-place to meet unforeseen water demands.

## B. Groundwater Storage Activities by Parties

The Judgment permits Parties holding water rights to store water in the Basin for later recovery. Pursuant to Section V.3.(B) of the Judgment, parties can convert their carryover to storage upon payment of the Replenishment Assessment to WRD.

Table 2 describes storage accounting, specifically total carryover from the previous 2019-2020 AY, storage activity for the 2020-2021 AY (transfers, water put into storage, water extracted from storage, and balances), and total balance carryover into the ensuing AY. Table 3 lists total quantities of water put into storage during the 2020-2021 AY. The total amount of water that was put into storage was 1,127.70 af, which is a 50% decrease in comparison to the previous AY. There was no water extracted from storage during the 2020-2021 AY (Table 4).

The Judgment also provides for the transfer of stored water between Parties. However, there were no storage transfers in the 2020-2021 AY (Table 5).

Table 6 provides a historical storage summary from 2014-2015 to 2020-2021 AY for water put into storage, water extracted from storage, storage balance, and the available adjudicated storage capacity.

### C. Total Extraction Right and Overextractions

Parties with water rights have a total extraction right, which is the maximum amount of groundwater that can be extracted in any one year. In the West Coast Basin, Parties with normal carryover and/or storage rights are allowed excess production (overextraction) of up to 120% of the sum of their AR +/- leased water. For example, if a Party has an AR of 1,000 af, 400 stored water rights, and leases an additional 200 af, their maximum yearly total extraction would be calculated as follows:  $(1,000 + 200) \times 1.2 = 1,440$  af. Under certain circumstances, a Party may be allowed an overextraction in a greater amount; however, prior approval must be obtained from the West Coast Basin Storage Panel. Any overextraction will be deducted in the subsequent AY.

Parties with neither normal carryover nor storage rights can overextract 10% of their AR +/- leased water or 2 af, whichever is greater. Any Party that exceeds their allowed excess production without prior approval is in violation of the Judgment. When a Party overextracts and is in violation of the Judgment, Watermaster notifies the Party to resolve the over-extraction issue. Any overextraction will be deducted in the subsequent AY.

During the 2020-2021 AY, two Parties had a combined cumulative overextraction of 37.80 af. One Party overextracted within the provisions of the Judgment and the other, Mike Vukelich is in violation of the Judgment with a total overextraction of 31.08 af. Table 7 lists overextractions by Parties for the 2020-2021 AY.

### D. Extractions of Contaminated Groundwater

A Party who is a water rights holder may petition the Administrative Body (WRD) for a Non-Consumptive Water Use Permit (NCWUP) as part of a project to remediate or ameliorate groundwater contamination. If the petition is granted, the Party may extract the groundwater without it counting against its production rights, so long as the conditions of the Judgment are met. A non-Party may extract contaminated groundwater for cleanup purposes by partnering with a Party who obtains the NCWUP and then assigns it to the non-Party. Table 8 lists current NCWUPs issued by WRD and the amounts of groundwater extracted under those permits.

In the 2020-2021 AY there were 828.03 af of non-consumptive water use extractions (the negative value represents a net re-injection of water produced). Appendix A reports these extractions by well and month.

### E. Extractions by Non-Parties

In the 2020-2021 AY there were no extractions by non-Parties reported, not including NCWUPs (Table 9).

### F. Extraction Exemptions

The Court approved an amendment to the Judgment during the 2018-2019 AY, which adds Section V.15, which allows for the extraction of non-potable groundwater by agencies with no AR. However, extractions of groundwater are only permitted if all of the following criteria are satisfied:

1. Only groundwater containing at least 500 milligrams/liter of chloride, as measured at the influent to any facility used to treat such water, may be extracted;
2. Extractions must be done by a public agency with statutory authority to clean contaminated groundwater;
3. Extractions of such groundwater must provide a “Regional Benefit” (as defined in Section II.27. of the Judgment) to the Basin as a whole and not just to the extracting party;
4. All extractions pursuant to the new Paragraph V.15 are subject to the payment of WRD’s Replenishment Assessment.

In addition, all new projects seeking an extraction exemption must be reviewed (as set forth in Section V.13 of the Judgment) and approved by the Water Rights Panel and WRD in its capacity as the Administrative Body. The Water Rights Panel and WRD must ensure that the project is technically feasible and will not cause material physical harm (as defined in Section II.21 of the Judgment) to the Basin. In addition, all approved extraction exemption projects must provide annual reporting in response to the required criteria.

During the 2020-2021 AY, there were no extraction exemption requests submitted. However, the WRD had a total production of 1,009.95 AF under the approved exemption received in 2018 for the Goldsworthy Desalter (Appendix A). In accordance with the terms of the exemption permit, the average chloride level at the influent remained above 500 milligrams/liter.

## **G. Adjudicated Rights Transfers**

Each year, ARs are transferred between Parties through leases (temporary transfers) and change of ownership (permanent transfers) transactions. Table 10 shows transfers of AR through leases, specifically the Parties involved, transaction type (leases with and without flex), amount, and recordation date. During the 2020-2021 AY there were six leases that transferred a total of 3,500.50 af (all leases were with flex). Leases with flex transfer both the pumping right and associated carryover rights to the lessee for the term stated within the lease agreement.

In transferring water rights, Parties must specify (1) the type of right (i.e., adjudicated rights, normal carryover, or drought carryover), (2) the amount of right to the nearest 0.01 af, and (3) the period of the lease, if applicable. Moreover, all leases must be made on an AY basis and must be executed by the Parties and received by the Administrative Body no later than one month and 15 days following the end of the AY in which the lease is effective.

The permanent transfer of water rights must be documented accordingly. Specifically, when land is sold on which a water right has been developed, the Administrative Body must receive a copy of the transfer document if the water right is also transferred. Water rights do not automatically pass to the new landowner unless the transfer document specifies the transfer of water rights and the exact amount of the water right that was transferred with the land. Watermaster maintains a template for a Deed of Water Rights – Permanent Transfer transaction on its website to ensure the information provided on the transfer document is sufficient. There were no permanent transfers in the 2020-2021 AY (Table 11).

There were 69 Parties and 56 rights holders to the Judgment in the 2020-2021 AY; right holders did not change since the previous AY. Appendix B shows the succession of ARs in the Basin and current Parties to the Judgment are listed in Appendix C.

## **H. Exchange Pool**

The Judgment authorizes an Exchange Pool to provide additional water rights to Parties without sufficient water. If a Party's estimated water requirement for the following fiscal year exceeds its total available water supply, that Party may purchase additional water from the Exchange Pool. There were no requests for Exchange Pool water during the 2020-2021 AY (Table 12).

## **I. Extraction Wells**

In the 2020-2021 AY, there were 74 reported extraction wells operating in the Basin, which is an increase of 2 active wells from the previous AY. The locations of the extraction wells are shown on Figure 1 by three distinct production classifications. Furthermore, according to information provided to Watermaster, there was 1 new extraction well completed (Table 13) and no extraction wells destroyed in 2020-2021 AY (Table 14).

## **J. Meter Testing Program**

Accurate measurement of groundwater extractions is essential for the successful management of groundwater in the Basin. Therefore, Watermaster requires an operative water meter to be installed at each extraction well. It is the responsibility of each Party to ensure that its meter and test facilities are installed properly and are maintained in good working condition. It is the goal of Watermaster to test the water meter at each active extraction well at least once every two years or when a Party requests a meter calibration. Watermaster tests meters by volumetric or pitot tube comparisons or other methods, as appropriate. Watermaster notifies a Party that it must repair or replace its meter when the meter registers beyond five percent accuracy. If the registration accuracy of the meter deviates by more than five percent, Watermaster may revise the well production amount.

The meter testing program is managed by the Water Rights Panel who has contracted with DWR to complete testing. During the 2020-2021 AY, the DWR visited 19 Parties and performed 39 tests. Tests showed that six meters did not pass, which means the meters were either more than five percent fast or slow. Please contact the Water Rights Panel for specific information regarding meter testing; contact information is available at [www.wrd.org/WBWRP](http://www.wrd.org/WBWRP).

# Water Supply

## A. Precipitation

Precipitation over the Basin has relatively minimal direct influence on the replenishment of the groundwater Basin. This is a result of the low soil permeability that characterizes much of the Basin and large impermeable surfaces (i.e. pavement and buildings). However, during years of high rainfall, increased runoff from the areas upstream of the Basin can result in increased replenishment to the Basin and decreased groundwater demand by the water users, which can result in lower rates of groundwater extraction from the Basin.

During the 2020-2021 AY, the following amounts of rainfall were measured at three precipitation stations:

- 5.00 inches at Los Angeles International Airport
- 4.49 inches at Long Beach Airport
- 4.66 inches at Torrance Airport

Figure 3 shows the location of the precipitation stations and other key facilities and Figure 4 shows the monthly average rainfall measured at all three stations. Based on the total rainfall measured at these stations, the mean precipitation over the West Coast Basin was 4.72 inches, which is 42% of the long-term mean of 11.21 inches (Figure 4). The long-term mean precipitation for 2020-2021 AY compared to the previous AY decreased by 1.42 inches.

## B. Groundwater Recharge

Replenishment of the Basin occurs primarily by injection of imported and recycled water into the West Coast and Dominguez Gap Seawater intrusion barriers located along the coast, and underflow from the Central Basin to the east and Santa Monica Basin to the north. As mentioned above, minimal rainfall over the Basin infiltrates into deeper aquifers of the Basin.

Water spread in the Central Basin percolates into the aquifers and, eventually, some groundwater crosses the Newport-Inglewood Uplift to replenish the groundwater in the West Coast Basin. Although the recharge water is not directly applied to the West Coast Basin, this recharge process returns large quantities of water to the Basin by substantially increasing the natural subsurface flow from the Central Basin to the West Coast Basin. There was a decrease of 31% in “local runoff” when compared to the previous AY, which is credited to the less-than-average rainfall received compared to the previous wet year. Table 15 shows the sources and quantities of water replenished in the Montebello Forebay area of the Central Basin for the 2019-2020 AY and the 2020-2021 AY. Specifically, for the second consecutive year, WRD purchased zero af of imported water for spreading in the Montebellow Forebay.

Water injected in the seawater intrusion barrier projects also contributes significantly to the replenishment of the Basin (see Section I, Seawater Intrusion Barrier Projects).

### **C. In-Lieu Replenishment**

During the 1965-1966 water year, WRD, in cooperation with the MWD, began an in-lieu replenishment program, where discounted imported water was offered seasonally due to availability. WRD contracted with producers having access to supplemental imported water that could be used in lieu of extracting groundwater from the Basin to reduce overall pumping impacts. However, due to water shortages and other reasons, MWD discontinued their discounted seasonal imported water in 2011 and as a result, WRD generally suspended its in-lieu replenishment program except under special circumstances. There was no in-lieu recharge in 2020-2021 AY (Table 16).

### **D. Imported Water**

Imported water has been the largest component of supply for the Basin since the mid-1950s. Water is imported from northern California via the State Water Project and the Colorado River and is made available to water users by MWD through its member agencies: City of Long Beach, West Coast Basin Municipal Water District, City of Torrance, and the City of Los Angeles. Table 17 lists imported water for direct use by sources of water, Party, and quantity (WRD replenishment water is not included in the table). During the 2020-2021 AY, a total of 127,098 af of water was imported.

### **E. Recycled Water**

Table 18 shows that 23,458 af of recycled water was used in the area overlying the Basin during the 2020-2021 AY, not including WRD replenishment water. This amount is 1,640 af or 7.52% more than was used in the previous AY.

### **F. Total Water Use**

Figure 5 shows the total water use in the Basin during the 2020-2021 AY, including extracted groundwater, imported water and recycled water for direct use.

### **G. Exported Water**

No groundwater was exported from the Basin. California Water Service Company exported purchased imported water from the Basin to portions of its service area in the Palos Verdes Hills.

## **H. Increased Extraction in the Central Basin for Certain Purveyors Serving Overlying Communities**

Per Section IV.K of the Central Basin Third Amended Judgment, “certain purveyors” are Parties to both the Central Basin Third Amended Judgment and West Coast Basin Judgment and serve communities overlying both the Central and West Coast Basins. These purveyors include the City of Los Angeles, Golden State Water Company, and California Water Service Company and are allowed to increase their extraction in the Central Basin beyond their Allowed Pumping Allocation, which is the amount of groundwater each Party may extract annually. However, the increased extraction is counted against their AR in the West Coast Basin. Increased extractions are limited to 5,000 af per AY.

In the 2020-2021 AY, the Golden State Water Company transferred 1,330 af of their rights from the West Coast Basin into the Central Basin. The 1,330 af was deducted from their unused West Coast Basin AR. This transfer of rights is reflected in Table 1, specifically deducted from the “Total Rights” column.

## **I. Seawater Intrusion Barrier Projects**

The Los Angeles County Department of Public Works operates two barrier projects, the West Coast Basin Barrier and the Dominguez Gap Barrier, within the Basin. The barriers are designed to prevent seawater intrusion into the freshwater aquifers of the Basin. Table 19 shows the quantities of imported and recycled water injected into the two barrier projects. In the 2020-2021 AY, 22,110 af of water were injected into these two barrier systems, which is a 3% decrease from the previous AY. The location of the two barriers systems are illustrated in Figure 3.

## **J. Groundwater Levels**

Figure 3 shows the location and water level elevations in the key wells located in the Basin. Figure 6 shows the water level elevations at the those key wells. More detailed information regarding groundwater levels in the Basin is provided in the WRD’s annual Engineering Survey and Report and Regional Groundwater Monitoring Report. These reports are available on WRD’s website.

# Watermaster Costs and Budget

To fund Watermaster activities, both the Administrative Body and the Water Rights Panel can levy an annual assessment on water rights holders under the terms of the Judgment. The Administrative Body charges a flat fee of twenty dollars (\$20) to each rights holder. In addition, the remaining amount of the Administrative Body budget is charged to rights holders based upon their proportional ownership of total AR. The Water Rights Panel assessment is charged to all water rights holders.

For the 2020-2021 AY, the Water Rights Panel rate was one dollar (\$1.00) per acre-foot of adjudicated rights. The Panel waived their assessment in the previous AY, but reimplemented the assessment this AY. The total Watermaster budget for 2020-2021 was \$172,896. This amount consists of the Water Rights Panel budget for \$64,468.25 and the Administrative Body budget of \$108,428.00, which is unchanged from the previous AY. A summary of the 2020-2021 budget is provided in Table 20.

<sup>1</sup> AR - Adjudicated Rights.

<sup>2</sup> Net Carryover is the sum of all carryover (drought and normal) from the previous year (AY 2019-20) less the amount of carryover conversion for the current year (AY 2020-21).

<sup>3</sup> See Table 3 for carryover conversion (water put into storage) per party for AY 2020-21.

<sup>4</sup> Storage includes storage withdrawals and carryover conversions for AY 2020-21. See Tables 2 through 4, for a summary of all Storage Accounting per party for AY 2020-21.

<sup>5</sup> Increased Extractions: Section IV(K) of the Central Basin Judgment permits increased extraction rights through use of up to 5,000 AF of certain parties' West Basin Rights in the Central Basin

<sup>6</sup> Total Extraction Right = Adjudicated Rights + Net Carryover + Leases + Storage + Increased Extraction.  
The aforementioned parties include City of Los Angeles, Golden State Water Company, and California Water Service Company."

<sup>7</sup> Amount pumped does not include storage withdrawals (Table 4), which totaled 0 af for AY 2020-21.

<sup>8</sup> Balance = Total Extraction Right - Amount Pumped

<sup>9</sup> Drought = drought carryover created in 1991.

<sup>10</sup> 2019-2020 net carryover reduced by 1,127.70 a.f. due to carryover conversion into storage for 2020-2021.

<sup>11</sup> Negative Normal Carryover will be deducted from the subsequent year's AR
