Introduction

The Central Basin Watermaster Service Area overlies about 227 square miles of the Central Basin (Basin) in southeastern Los Angeles County. Figure 1 shows the location and boundaries of the Central Basin Watermaster Service Area. The Watermaster Service Area is bounded by the Newport-Inglewood Uplift on the southwest, the Los Angeles-Orange County line on the southeast, and an irregular line that approximately follows Stocker Street, Martin Luther King Boulevard, Alameda Street, Olympic Boulevard, the boundary between the City of Los Angeles and unincorporated East Los Angeles, and the foot of the Merced Hills and Puente Hills on the north. Twenty-three incorporated cities and several unincorporated communities are found within the Watermaster Service Area. Groundwater from the Basin provides a substantial portion of the water supply needed by the residents, businesses, and industries in the area overlying the Basin.

More than 60 years ago, groundwater overdraft and declining water levels in the Basin threatened the area's groundwater supply and caused the intrusion of sea water into the southern part of the Basin. However, timely legal action and adjudication of the water rights halted the overdraft and helped to prevent further damage to the Basin. Since that time, groundwater extraction from the Basin is limited to the amounts set by a Superior Court Judgment and is monitored by a Court appointed Watermaster.

The Watermaster assists the Court in the administration and enforcement of the provisions of the Judgment and consists of three separate arms with different functions.

- The first arm is the Administrative Body, which administers the Watermaster accounting and reporting functions. The Water Replenishment District of Southern California (WRD) was appointed by the court to fulfill this role.
- The second arm is the Water Rights Panel, which enforces issues related to the pumping rights within the adjudication. The Water Rights Panel is made up of seven water rights holders who are selected by vote by holders with Allowed Pumping Allocation (APA). Current members of the Water Rights Panel are the City of Downey, Golden State Water Company, City of Lakewood, City of Long Beach, Montebello Land and Water Company, City of Signal Hill and the City of Paramount.
- The third arm is the Storage Panel, which is comprised of the Water Rights Panel and the WRD Board of Directors, which together approve certain groundwater storage efforts.

This 2016-2017 Watermaster Report, developed by the Administrative Body and adopted by the Central Basin Water Rights Panel, provides information on groundwater extractions, storage accounts, use of imported water and recycled water, replenishment operations, and the budget and finances of Watermaster during the 2016-2017 fiscal year.

Water Use

A. Allowed Pumping Allocation Extractions by Parties

The Judgment limits the amount of groundwater each party may extract annually (i.e. APA) from the Basin. The APA for each party is shown in Table 1. A participant of the Exchange Pool, which provides the opportunity to purchase additional water rights if a party's water requirement exceeds water supplies, may pump the amount purchased in addition to its APA. Parties are required to report water extractions to the Administrative Body each month. Appendix A lists, by party, the volume of groundwater extracted each month from each active well in the Basin. Figure 1 describes the variation of groundwater production by three distinct production classifications, including less than 500 acre-feet per year (afy), 500 to 2,000 afy, and more than 2,000 afy, during 2016-2017. In addition, Figure 2 describes monthly water production (including non-consumptive use) for 2016-2017 and Figure 3 describes key wells and facilities.

To provide flexibility in regards to groundwater extractions, the Judgment contains provisions, such as the "One Year Carryover," which allows each party to carry over into the succeeding administrative year a portion of its unused APA and in some cases to over-extract. This type of provision is necessary to meet unforeseen water demand. For 2016-2017, the amount of carryover available to each party is 60% of its APA or 20 acre-feet, whichever is more, less the quantity of water in a parties storage account, or 20% of a party's APA. Furthermore, any unused Exchange Pool water is carried over into the following fiscal year.

B. Storage and Extractions from Storage

The Third Amended Judgment permits parties holding water rights to store water in the Central Basin for a later recovery. Storage accounting is shown in Table 2. During 2016-2017, 5,858.27 acre-feet of water was put into storage, as described in Table 3. In addition, 1,815.24 was extracted from storage, as shown in Table 4.

All of this water was put into storage pursuant to Section III.A.(2) of the Third Amended Judgment, which allows parties to convert carryover to storage upon payment of the Replenishment Assessment to WRD.

The Judgment also provides for the transfer of stored water between parties. However, as shown on Table 5, there were no transfers of stored water during 2016-2017.

Table 6 summarizes storage activity, including water put into storage, water extracted from storage, storage balance, and the available adjudicated storage capacity for the current and previous three years.

C. Regional Disadvantaged Communities Incentive Program

Section II.H of the Third Amended Judgment contains provisions for the development of a Regional Disadvantaged Communities Incentive Program (RDCIP) that allocates 23,000 acre-feet of storage space for the use or benefit of Disadvantaged Communities (DAC) within the Central Basin. A DAC is defined as any area that is served by a Water Purveyor and consisting of one or more contiguous census tracts which, based upon the most recent U.S. Census data, demonstrates a median household income which is less than eighty percent (80%) of the median household income for all Census Tracts within the State of California. This program was developed by the Water Rights Panel during 2014-2015 and approved by the Court in June 2015.

There were no requests for participation in the RDCIP in 2016-2017.

D. Overextractions

The Judgment provides for overextractions under certain conditions. A party may over extract by 20 percent of its APA or 20 acre-feet, whichever is greater. When a party overextracts in violation of the Judgment, Watermaster notifies the party to resolve the overextraction issue. Under certain circumstances, a party may overextract in a greater amount; however, prior approval must be obtained from the Watermaster. The overextraction must be made up in the following administrative year unless Watermaster concludes that making up the overextraction would create an unreasonable hardship for the party. In such cases, Watermaster may adjust the requirement. For example, Watermaster may prorate the reduction in the party's APA over a period of up to five years.

Table 7 lists the names of parties that have over extracted groundwater during the year and shows the amount of overextraction by each party. During 2016-2017, four parties had a combined cumulative overextraction of 24,295.39 acre-feet. The table also identifies one party, State of California (CalTrans), that has over extracted and is in violation of the Judgment. Since 1997-1998, CalTrans pumped groundwater for dewatering beneath the 105 freeway in the cities of Paramount and South Gate. CalTrans over-extracted 24,143.97 acre-feet of water between 1997-1998 and 2015-2016 and extracted 151.57 acre-feet in 2016-2017.

E. Extractions by Non-Parties

Table 8 shows extractions by non-parties, if any, and Appendix A reports these extractions by well and month. In the 2016-2017 AY there were no extractions by non-parties reported.

F. Extractions of Contaminated Groundwater

Any party may petition WRD for a Non-consumptive Water Use Permit (NCWUP) as part of a

project to remedy or ameliorate groundwater contamination. If the petition is granted, the party may extract the groundwater without the production counting against its production rights, so long as conditions of the Judgement are met. Table 8 lists current NCWUPs issued by WRD and the amounts of groundwater extracted under those permits. A total of 72.97 acre-feet of water was extracted under NCWUPs in 2016-2017.

G. Allowed Pumping Allocation Transfers

Each year, APAs are transferred between parties through sales and leases. Appendix B shows the succession of APAs in the Basin as of June 30, 2017. Water rights sales have reduced the number of parties from 508 in 1966-1967 to 131 in 2016-2017.

Table 9 shows transfers of APAs through leases and Table 10 shows transfers of APA and carryover through sales. During 2016-2017 there were 52 leases that totaled 20,936.66 acre-feet and three sales of APAs that totaled 123 acre-feet. Each party's APA, as of June 30, 2017, is also shown in Table 1.

When land is sold on which a water right has been developed, the Watermaster must receive a copy of the sale document if the water right is also sold. The water right does not automatically pass to the new land owner unless the sale document specifies that the water right was sold with the land. For the proper accounting of the water right, the sale document must specify the exact amount of water right(s) sold.

In transferring water rights, parties must specify (1) the type of right (i.e., APA, normal carryover, or drought carryover), (2) the amount of right to the nearest 0.01 acre-foot, and (3) the period of the lease, if applicable. Moreover, all leases must be made on an administrative year basis and must be executed by the parties and received by Watermaster by August 15th of the year in which the lease is effective.

H. Exchange Pool

The Judgment authorizes an Exchange Pool to provide additional water rights to parties without sufficient water. If a party's estimated water requirement for the following fiscal year exceeds its total available water supply, that party may purchase additional water from the Exchange Pool. Any party wishing to purchase water from the Exchange Pool must file a request with the Watermaster before April 1. If no requests are received by April 1, the Exchange Pool will not operate in the following fiscal year, and Watermaster will not process Exchange Pool forms. Table 11 shows that there were no requests for Exchange Pool water during 2016-2017.

I. Status of Extraction Wells

In the Basin there are 300 reported active extraction wells. The locations of the active extraction

wells are shown in Figure 1. Table 12 shows that two new extraction wells were completed in 2016-2017 and Table 13 shows that one extraction well was destroyed.

J. Meter Testing Program

Accurate measurement of groundwater extractions is essential for the successful management of groundwater in the Basin. Therefore, Watermaster requires an operative water meter to be installed at each extraction well. It is the responsibility of each party to ensure that its meter and test facilities are installed properly and are maintained in good working condition. It is the goal of Watermaster to test the water meter at each active extraction well at least once every two years or when a party requests a meter calibration. Watermaster tests meters by volumetric or pitot tube comparisons. Watermaster notifies a party that it must repair or replace its meter when the meter registers beyond five percent accuracy. Watermaster calculates the monthly water production for each well using the meter readings and Unit of Measure Code reported for the well that month. If the registration accuracy of the meter deviates by as much as 5 percent, the calculated well production could be subject to revision.

During 2016-2017, the Department of Water Resources, under contract to the Water Rights Panel, visited 46 parties and tested 220 meters. Tests showed that two meters were more than five percent fast. These meters were repaired or replaced, and retested and passed. One was 20.3% fast and the other was 44.9% fast. No meters tested slow.

Water Supply

A. Precipitation

Because of the low soil permeability that overlies the primary water-producing aquifers throughout much of the Basin and largely impermeable surfaces (i.e., pavement and buildings) cover most of the forebay areas, precipitation over the Basin has relatively little direct influence on the replenishment of the groundwater in the Basin. However, during years of high rainfall, increased runoff from the areas upstream of the Basin can result in increased replenishment to the Basin and can result in decreased water demand by the water users overlying the Basin, which in turn, can result in lower rates of groundwater extraction from the Basin.

During 2016-2017, the following amounts of precipitation were measured at five precipitation stations: 16.13 inches at Los Angeles-RD241 (formerly 96th and Central), 23.37 inches at Montana Ranch, 19.00 inches at USC, 22.11 inches at La Mirada Station, and 18.75 inches at Imperial Yard. Note that data for the Whittier City Yard station is not included in the 2016-2017 report due to a gap in the data. Figure 3 shows the locations of these precipitation stations, and Figure 4 shows the monthly average of the rainfall measured at these stations. Based on the total rainfall measured at these stations, the mean precipitation over the Central Basin was 19.87 inches, which is 145 percent of the long-term mean precipitation at these stations.

B. Groundwater Recharge

Natural replenishment of the groundwater in the Basin is largely from surface flow and underflow through Whittier Narrows from the San Gabriel Valley. As mentioned above, little of the rainfall over the Basin would be likely to infiltrate into deeper aquifers of the Basin.

Intentional replenishment of groundwater in the Basin is accomplished by spreading water at the Rio Hondo and the San Gabriel River Spreading Grounds in the Montebello Forebay (Figure 3). The sources of this replenishment water include local storm runoff, purchased imported water, and recycled water from three reclamation plants located upstream of the Basin. Table 14 shows the sources and quantities of water spread to replenish the groundwater.

C. In-Lieu Replenishment

During the 1965-1966 water year, WRD, in cooperation with the Metropolitan Water District of Southern California (MWD), began an in-lieu replenishment program. WRD may contract with any producer having access to supplemental water that could be used in lieu of extracting groundwater from the Basin.

In 2016-2017, WRD did not offer the in-lieu replenishment program to Central Basin water rights holders, as shown in Table 15.

D. Imported Water

Water is imported from northern California via the State Water Project and from the Colorado River and is made available to water users by MWD through its member agencies: Central Basin Municipal Water District (CBMWD) and the Cities of Compton, Long Beach, and Los Angeles. The City of Los Angeles also imports water from the Owens River-Mono Basin, and the California Domestic Water Company, the San Gabriel Valley Water Company, the Suburban Water Systems, and the City of Whittier import groundwater from the San Gabriel Valley groundwater basin, which lies to the northeast and upstream of the Basin. Table 16 shows that in administrative year 2016-2017, a total of 96,919 acre-feet of water was imported to the area overlying the Central Basin for potable use. In addition, WRD purchased 32,693 acre-feet of spreading water from the MWD (Table 14).

E. Quality of Imported Water

The table below summarizes MWD’s imported water quality for injection, spreading, and potable use. In 2016-2017, only State Water Project water was used for spreading, while injection and potable demands were met with a blend of Colorado River and State Water Project Water.

MWD’s water quality for injection, spreading and potable water.

Constituent	Colorado River Water¹ (mg/L)	State Water Project Water² (mg/L)
Chloride	98	93
Sulfate	251	80
Hardness (as CaCO ₃)	291	129
Total Dissolved Solids	638	368

¹ At Lake Mathews - from 2016 MWD Annual Water Quality Report

² At Castaic Lake - from 2016 MWD Annual Water Quality Report

F. Recycled Water

Table 17 shows that 13,838 acre-feet of recycled water was used in the area overlying the Basin during 2016-2017. This amount is 159 acre-feet less than was used in 2015-2016. These amounts do not include the recycled water used to replenish groundwater in the Basin.

G. Total Water Use

Figure 5 shows the total water use in the Basin during 2016-2017, including extracted groundwater, imported water and recycled water for direct use.

H. Exported Water

California-American Water Company exported 2,257 acre-feet of groundwater from the Basin to its service area that overlies a portion of the West Coast Basin.

I. Alamitos Gap Barrier Project

Sea water intrusion in the Alamitos Gap near the mouth of the San Gabriel River poses a threat to the groundwater in the Central Basin. The Alamitos Gap Barrier Project is designed to prevent sea water intrusion into the fresh water aquifers of the Basin. The location of the barrier is shown on Figure 3.

The Los Angeles County Department of Public Works operates the barrier project, which is comprised of 43 injection wells that create a groundwater ridge to halt sea water intrusion. In addition, the project includes 220 observation wells that are used to monitor groundwater levels and quality in the area. Table 18 shows the quantities of imported water and of recycled water injected into the barrier wells. The sea water intrusion problem has been contained by the barrier project.

J. Groundwater Levels

Figure 3 shows the locations of selected wells that are used to monitor groundwater level elevations in the Basin. Figure 6 shows the water level elevations in key wells located in the Montebello Forebay, and Figure 7 shows the water level elevations in wells perforated in Principal Aquifers of the Basin.

Watermaster Administration Costs and Budget

To fund Watermaster activities, both the Administrative Body and the Water Rights Panel have annual assessments that are levied on water rights holders under the terms of the Judgment. The Administrative Body assessment is charged to those rights holders that have extracted from the Central Basin within the past two years (active rights). The assessment is a flat fee of twenty dollars (\$20) per active rights holder plus a proportion of the remaining Administrative Body budget based on the APA of the active rights holder. The separate Water Rights Panel assessment is charged to all water rights holders, not just active rights holders, based on their APA regardless of time frame of extractions.

The Watermaster budget for 2016-2017 is \$399,530.30. This amount is composed of the Water Rights Panel budget of \$195,630.30 and the Administrative Body budget of \$203,900.00. A summary of the 2016-2017 budget is provided in Table 19.

¹ APA - Allowed Pumping Allocation.

² Net Carryover is the sum of all carryover from the previous year less the amount of carryover conversion for the current year.

³ See Table 10 and Table 11 and Appendix B for information concerning leases. Lease with flex includes carryover provisions.

⁴ Storage includes Carryover Conversion for Administrative Year 2016-17.

⁵ Allowable Extraction = Allowed Pumping Allocation + Net Carryover + Leases + Storage.

⁶ Balance = Allowable Extraction - Amount Pumped.

⁷ DCO 77 - drought carryover created in 1977.

⁸ DCO 91 - drought carryover created in 1991.

⁹ Sale subject to lease with flex to Montebello Land and Water Company.

¹⁰ Includes 3,958 acre-feet of increased extraction accounted for in Allowable Extraction (pursuant to Section IV(K) of the Central Basin Judgement).
