SUMMARY

Staff monitors groundwater conditions in the District's service area throughout the year to ensure sustainable water management. A summary of the latest information is presented below.

Precipitation (October 1, 2025 to May 30, 2026)

The WRD 6 Station Precipitation Index reports that for the 2025-26 Water Year, there has been above average rainfall (17.36 inches) through May 30, 2026. The normal rainfall for this time period is 15.14 inches, hence the District is 115% of normal.

Precipitation % of Normal to Date

Drought Monitor (June 2, 2026)

As of June 2, 2026, the U.S. Drought Monitor is reporting 60% of the State is abnormally dry (same), 8% under moderate drought (up 2%), 0% under severe drought (same), 0% under extreme drought (same) and 0% under exceptional drought (same) conditions. According to the U.S. Drought Monitor, Los Angeles County is currently not under any drought condition.

Select California Reservoirs (June 1, 2026)

For the 21 reservoirs reported monthly to the committee, water levels have increased in 7 of 21 reservoirs. The largest increase (0.11 million acre feet, MAF) occurred at Lake Powell and smallest increase (<0.01 MAF) occurred at Lakes McClure and Perris. The largest decrease (-0.32MAF) occurred at Lake Mead. The smallest decrease (<-0.01 MAF) occurred at Lakes Sonoma, Cachuma, Casitas, Silverwood, and Diamond Valley.

DWR Managed Reservoirs (SWP) Storage in Million Acre Feet

Reservoir	Capacity	Storage	% Full	Change
Trinity Lake (CLE)	2.45	2.15	88%	-0.07
Lake Shasta (SHA)	4.55	3.94	86%	-0.19
Lake Oroville (ORO)	3.54	3.33	97%	-0.05
New Bullards Bar (BUL)	0.97	0.91	94%	-0.03
Folsom Lake (FOL)	0.98	0.95	97%	-0.01
Camanche Lake (CMN)	0.42	0.40	96%	0.02
New Melones L. (NML)	2.40	1.81	75%	-0.06
Don Pedro Res (DNP)	2.03	1.94	95%	0.04
Lake McClure (EXC)	1.02	0.88	86%	0.00
Lake Sonoma (WRS)	0.38	0.26	68%	0.00
San Luis Res (SNL)	2.04	1.50	73%	-0.16
Millerton Lake (MIL)	0.52	0.50	96%	0.01
Pine Flat Res. (PNF)	1.00	0.81	81%	-0.05
Cachuma Lake (CCH)	0.19	0.19	96%	0.00
Castaic Lake (CAS)	0.33	0.30	91%	0.01
Casitas Lake (CSI)	0.25	0.24	99%	0.00
Perris Lake (PRR)	0.13	0.12	90%	0.00
L. Silverwood (SLW)	0.08	0.07	92%	0.00

USBR and MWD Reservoirs (CRA) Storage in Million Acre Feet

Reservoir	Capacity	Storage	% Full	Change
Lake Powell	23.31	5.72	25%	0.11
Lake Mead	26.12	7.68	29%	-0.32
Diamond Valley L (DVL)	0.81	0.78	97%	0.00

Black Text - Decrease or no change in storage since the last report.
Green Text - Increase in storage since the last report.

These 21 reservoirs are at 47% capacity (34.46 MAF) which is down 0.75 MAF (-1.0%) from the prior month (-0.54 MAF State Water Project [SWP] and -0.21 MAF Colorado River Aqueduct [CRA]).

Did you know?

California had started 2026 with reservoirs near historic highs after heavy winter storms, and early-January reporting said major reservoirs were around 129% of historical water levels for that time of year.

Groundwater Levels (May 28, 2026)

Groundwater levels in key monitoring wells are shown in the hydrographs below.

Central Basin Key Well Long Beach #6 and West Coast Basin Key Wells Lawndale #1 & Carson #1 are in a confined aquifer and do not respond readily to rainfall but instead to changes in pumping patterns and barrier recharge.

Central Basin Key Well 1601T is between the two spreading grounds and rises rapidly with rainfall and replenishment but falls sharply during dry spells and lack of replenishment.

Groundwater Level Changes in Key Wells

Well Name	Since Last Report	Since Same Time the Previous Year
Central Basin Key Well 1601T	Increased 0.12 foot	Increased 26.0 feet
Central Basin Key Well Long Beach #6_4	Decreased 5.4 feet	Decreased 8.5 feet
West Coast Basin Key Well Lawndale #1_4	Increased 0.04 foot	Decreased 0.2 foot
West Coast Basin Key Well Carson #1_2	Decreased 0.2 foot	Increased 7.5 feet

Bold indicates a change in direction (decreasing or increasing) since the last report.

Optimum and Minimum Groundwater Quantity (May 30, 2026)

The Board of Directors adopted an Optimum and Minimum Quantity for groundwater in the District that would sustain adjudicated pumping rights, leave room for future storage projects, and identify a lower limit. The amounts are based on the accumulated overdraft concept, which the District tracks year by year based on changes in groundwater storage.

After an extensive review of over 70 years of water level fluctuations and discussions with the Board and pumping community, Water Year 1999/2000 was recognized as a representative year for the Optimum Quantity, which equated to an accumulated overdraft of approximately 612,000 acre feet. The Minimum Quantity was defined as an accumulated overdraft of 900,000 acre feet. The Board also adopted a policy to make up the groundwater deficit should the accumulated overdraft fall too far below the Optimum Quantity.

The Accumulated Overdraft as of April 30, 2026, has been estimated at 526,629 acre feet (subject to change), which is 373,371 acre feet above the Minimum Quantity and 85,371 acre feet above Optimum Quantity. The Basin is at 130% of Optimum Quantity which is 1% higher than what was reported last month (~0.5K AF higher).

FACT:

Local groundwater is generally more climate-resilient when recharge and pumping are balanced, while imported water is vulnerable to drought, climate change, and competition from other users.

Montebello Forebay Spreading Grounds (July 2025 to April 2026)

The following Charts show the preliminary spreading grounds replenishment water for the current Fiscal Year (2025-26; 10 months) and Water Year (2025-26; 7 months):

No imported water purchases were planned for, or purchased in, Fiscal Year 2025-26.

Local water (stormwater plus dry weather urban runoff) is captured by the Los Angeles County Department of Public Works (LACPW) at the Montebello Forebay spreading grounds for recharge. Local water amounts are determined as the sum of the total water conserved at the County recharge facilities less the imported and recycled water deliveries. For the 2025-26 Fiscal Year, 112,913 acre feet of local water capture have been reported by the LACPW.

Preliminary numbers for the 2025-26 Fiscal Year show that approximately 48,803 acre feet of recycled water has been recharged with 8,182 acre feet consisting of advanced treated water from the ARC AWTF and 37,621 acre feet of tertiary recycled water. Presuming the advanced treated water as “Null Water”, the 120-month running average of the recycled water contribution in the Montebello Forebay is 31.3% and the regulatory maximum is 45%, with additional monitoring being required once 40% is reached.

Spreading Grounds Recharge
Jul 2025 - Apr 2026

Percent Recycled Water
120-Month Running Average

Tertiary Recycle Water Permit Update

The permit is continuing to progress with LACSD and WRD staff working to update pertinent sections of the new Title 22 Engineering Report. Due to the persistent drought conditions over the past few decades and associated emergency drought proclamation by Governor Newsom, LACSD and WRD submitted a request to modify the recycled water contribution percentage to 50% and the advanced treated water classification to diluent in a letter to the LARWQCB and CA-DDW dated July 8, 2022. LACSD and WRD staff are targeting 2026 to have the new Title 22 Engineering Report submitted, including the requests to increase the recycled water contribution percentage to 50% and reclassify the advanced treated water as diluent.

Seawater Barrier Well Injection and Replenishment (July 2025 to April 2026)

The following Chart shows the barrier water injection:

Preliminary numbers for the 2025-26 Fiscal Year show that the West Coast Barrier has used 9,844 acre feet of the total 14,400 acre feet planned for injection, 68% of total for the Fiscal Year. The Dominguez Gap Barrier used 5,875 acre feet of the total 7,200 acre feet planned for injection, 82% of the total for the Fiscal Year. The Alamitos Gap Barrier, on the WRD side, used 2,465 acre feet of the total 3,800 acre feet planned for injection, 65% of the total for the Fiscal Year. Advanced Treated Recycled Water (ATW) usage at the three barriers for the Fiscal Year to date is 87% at the West Coast Barrier (+2% from last month), 64% at the Dominguez Gap Barrier (-3% from last month), and 52% Alamitos Gap Barrier (+3% from last month). The combined ATW usage at all three barriers is 75% (same as last month).

Total Pumping (Fiscal Year 2025-26, July 2025 to April 2026)

Preliminary numbers for groundwater production in the District for the Fiscal Year 2025-26 indicate total pumping in the Central Basin was up 784 acre feet from the same time of the previous fiscal year (+0.6%) and the West Coast Basin total pumping was 7,869 acre feet lower than the previous fiscal year (-21.3%). The total pumping is 169,293 acre feet compared to 176,378 acre feet during the same time the previous year for a decrease of 7,085 acre feet, or -4.0%. The current pumping data does not include five (5) Central Basin pumpers and two (2) West Coast Basin pumpers, who have not yet reported, for an estimated 13 additional acre feet.

Interesting...

85% of Californians depend on groundwater for some of their water needs.

Preliminary numbers indicate 152,194 acre feet of groundwater have been pumped this fiscal year and is 3.0% below the projected fiscal year to date goal of 156,836 acre feet (or -4,642 acre feet). Monthly actual production versus the 7-year average monthly production projections (FY2019 through 2025) are included in the chart below.

"Sustainable groundwater use requires continuous monitoring of water consumption.
 – Food and Agriculture Organization of the United Nations

For the Fiscal Year 2025-26 (July 2025 to April 2026), staff has tracked the production trends of the top five (5) producing pumpers and the bottom five (5) producing pumpers in each basin. These pumpers are identified in the following tables and are based on the change in volume (in acre feet) compared to the same time period for the previous Fiscal Year. Production data for all the pumpers can be found in the attached Exhibit A (Central Basin) and Exhibit B (West Coast Basin).

Water Replenishment District (WRD) publishes the Groundwater Basin Update (GWBU) monthly. All information contained herein is preliminary and is meant to be a snapshot of the status of the basins at the time of publication and should not constitute an official WRD report. All the information presented in the GWBU utilizes the best available data at the time of publication. Data provided herein is a compilation of WRD data and publicly available information from several of our partners including, but not limited to, the Los Angeles County Department of Public Works - Stormwater Engineering Division, Metropolitan Water District of Southern California, California Department of Water Resources, US Bureau of Reclamation, University of Nebraska - Lincoln, and the US Department of Agriculture - Natural Resources Conservation Service. The GWBU is prepared by Senior Hydrogeologist, Everett Ferguson, who can be contacted directly with questions at eferguson@wrdd.org.
